

Orion StarShipper is a flexible and scalable business application designed for organisations managing their own warehousing and distribution including the use of 3rd party logistics and carrier management. It interfaces easily with other systems and therefore provides enterprise wide benefits.

The ability to accurately control the flow of goods and the related information throughout the warehousing and distribution process requires a flexible and scalable solution that adapts to changing requirements. Stock visibility is essential to effective inventory management, **Orion StarShipper**

gives you and your customers a clear and accurate view of the relevant stock and reports in real-time.

Orion StarShipper drives automation and efficiencies throughout the warehousing and distribution chain making sure all departments operate from the same business critical information. The benefits are tangible and immediate - improved business planning, analysing and anticipating demand resulting in greater productivity and lower operating costs

Features include:

- **Order Management**
- **Customer KPIs**
- **Optimised Order Picking**
- **Warehouse Management** & Inventory control
- **RF Scanning**
- **Transport and Carrier management**
