

The **Orion StarPick** Warehouse Management System (WMS) manages multiple facilities and configurations. With Service-oriented architecture (SOA) and powerful integration capabilities it provides easy integration with existing infrastructure. **Orion StarPick** also fully supports leading edge technologies such as radio frequency identification (RFID) and a variety of pick regimes including Pick by Voice.

StarPick leverages state-of-the-art technology to deliver the functionality you need to maximize operational efficiency and increase throughput resulting in significant productivity gains and cost reductions.

The **StarPick** WMS executes processes such as:

- Multi-client processing with authorised visibility
- Goods receipt
- Put-Away
- Auto Replenishment of Picking Locations
- Shelf Life & Batch Control
- Various Picking regimes
- Consolidated Picking
- Marshalling of Picked Goods/Pallets
- Loading of Vehicles
- Full Stock Takes
- Perpetual Inventory
- Event Management
- Operator Performance Analysis
- 3rd Party Contract Management

Using **StarPick** can provide immediate and ongoing benefits, for example:

- Maintain optimum inventory levels along with best Put Away locations
- Lower warehouse operations cost due to increased productivity
- Lower inventory through increased visibility across the extended chain
- Increased pick accuracy
- Improved Customer service due to better fulfilment rates
- Greater ability to respond speedily to change.
